

The Great American Total Solar Eclipse of 2024

Aman Priyadarshi M. Kumar

Digital Photography

Documented on April 8, 2024, in Idabel, Oklahoma, this series of photographs captures the progression of the Great American Total Solar Eclipse, an astronomical event that will not be observable again in North America until 2044. Each phase, from partial eclipse to totality, reveals the dynamic changes in solar visibility, culminating in a spectacular view of the solar corona. This phenomenon, caused by the moon's alignment with the sun, provides a rare glimpse of the outer solar atmosphere.
